

- Open Applications Group builds and publishes a business process interoperability standard for enterprise business processes
  - Defines the basis for building business languages.
  - Enables all business languages to be based on same concepts and building blocks.
  - Will increase interoperability within and across supply chains
- Open Applications Group is embarking on a project to rework the OAGIS standard using the UN/CEFACT CCTS 3.0 methodology

Challenge #6: Building, Emergency, and Energy Standards

- Aims to build an ontology for spatial representation and correlated temporal representation to facilitate common understanding for interoperability to support specific defined services to support the integration of <u>emergency</u> and <u>energy standards</u>.
- Several organizations and "languages" need to work together as a web service over the internet
