# Linked Open Ontology Cloud KOKO – a Decade's worth of Lessons Learned

**Matias Frosterus**
The National Library of Finland

The idea of a Linked Open Ontology Cloud is to make a set of interconnected vocabularies maintainable in a distributed way yet utilizable as a cohesive whole for information retrieval. The National Library of Finland along with a number of organizations from the Finnish public sector have been maintaining such a cloud for an extensive period of time now. This presentation will go over the theory of the cloud, the application to practice, as well as lessons learned.
