

Preparing BARTOC for the future of Knowledge Organisation

Jakob Voss

Uma Balakrishnan

Abstract

BARTOC is a registry of various kinds of knowledge organisation systems. It unites Information about a vocabularies and terminology registries to facilitate use of KOS. Its infrastructure and functionality have been extended to give access to as many KOS as possible in a uniform way. In addition to update information on vocabularies and new features such as versioning, the database is being integrated with other terminology repositories, research data infrastructures and plans to upgrade and enhance its search functionalities. After introducing the basic features, this presentation will discuss the recent developments, next steps, and challenges.
